Xi Wang

Research & Data Analytics

xiwang.geo@outlook.com | xiwang-geo.github.io | github.com/xiwang-geo

Statistics graduate and master's student in Resources and Environment. Interested in isotope hydrology, numerical analysis and ecological modelling, with applications of quantitative methods to financial, business and product questions.

Education

Yunnan University | Master's student, Resources and Environment | Sep 2026 - Present

Guangzhou University | BSc in Statistics | Sep 2022 - Jun 2026

Research Experience and Directions

Numerical Analysis in Isotope Hydrology | Current research

Align precipitation stable-isotope records with sampling intervals and weather data. Compare models on common records using external evaluation and uncertainty analysis. Current focus: whether antecedent weather adds information beyond conditions during sampling.

Marine Food Webs and Ecosystem Modelling | Previous and continuing work

Use Ecopath / Ecosim to study functional groups, trophic flows and ecosystem dynamics. Work includes cross-model group harmonisation, flow comparisons, sensitivity analysis and simulations under fisheries and environmental change.

Applied Projects

CSI 300 ETF Comparison and Fund Screening | Oct 2026

Compare fees, returns, risk and tracking across five ETFs and three predefined windows, producing 15 product-window comparisons. Translate the analysis into screening, side-by-side comparison and metric explanations.

Uniswap Activity, Address Return and Concentration | Oct 2026

Build daily and weekly activity measures, first-observed cohorts and concentration analysis from 84 days and 15,123 real Swap events. Deliver reports, SQL and an interactive dashboard, with conclusions limited to one pool and address proxies.

Methods, Tools and Interests

Tools in practice: Python, R, SQL and Ecopath / Ecosim. Methods include statistical modelling, model evaluation, time-series analysis, data validation and visualisation.

Interests: financial analysis, numerical analysis, business analytics and ecological modelling. Open to remote internships in data, financial, business and product analysis.
